AutoCAD The AutoCAD Drawing Tools panel The idea is to make drawing easy, even for users who have never drawn a line in their life. In AutoCAD, a drawing is made up of a series of linked geometric primitives called “geometry”, which can be lines, arcs, circles, polylines, splines, ellipses, rectangles, polygons and arcs. They are each defined by three points or two lines. For instance, you can draw a rectangle by specifying the two lengths and the two angles of the rectangle sides, the length and the width of the top and bottom lines, and the location of the top-left corner of the rectangle.
