\*Apply a symmetrical alpha blur to your images \*Easy to use, intuitive interface \*Compatible with Paint.net versions 2.5.x or older \*Keep in mind that image modifications can be observed in real time \*Worth mentioning is that image modifications can be observed in real time, so there's no need to go through with the effects just to be able to check out the new photo and undo the action or remove the last created layer if you're not pleased with the outcome What's new Version 2.2: New Paint.net add-in: Alpha Blur (1,500 KB) has been released. It's a small-sized plug-in made to apply alpha blur to your photographs. It features a couple of intuitive options that can be easily figured out, even if you're new to this advanced image editing application.Easy to install and access:There is no setup pack involved, since all you have to do is copy the downloaded DLL file to the "Effects" folder of Paint.net, whether you have an installer or portable edition available. In the following step, you can launch or restart the tool if it was already running, in order to commit changes and get access to Alpha Blur.It can be quickly spotted in the "Blurs" submenu of the "Effects" menu, thanks to a tiny icon that resembles a piece of puzzle, which can be found next to all Paint.net extensions originating from external sources.Apply alpha blur to photographsThe control panel is small and has a simple structure, displaying only the slider required for adjusting the alpha radius. If you want to get more accurate results than the ones produced by moving the slider, you can either enter the numerical value of the radius in the dedicated box, or click on two arrow buttons to increase or decrease this number. The setting can be reverted to default anytime.Worth mentioning is that image modifications can be observed in real time, so there's no need to go through with the effects just to be able to check out the new photo and undo the action or remove the last created layer if you're not pleased with the outcome.Compatibility issues with newer Paint.net:We failed in our attempt to get Alpha Blur up and running with the latest version of Paint.net in our evaluation. However, we must also keep in mind that it hasn't been updated for a long time. It still works smoothly with older editions of this graphic processing utility, though.Version 2 77a5ca646e

## Alpha Blur

Alpha Blur is an advanced Photoshop-like plug-in for Paint.net. It can be used to quickly blur images of any size, and even to make them look faded. Download: You can download Alpha Blur from the free trials section of the official website. Alpha Blend is a freeware Color Grading plug-in for Paint.net. It offers the user a couple of interesting blending modes, enabling a more precise result as compared to the default mode. This might seem a little bit unusual, but the tool contains a set of presets that can easily produce the desired result when users employ a couple of them. The main control panel offers three horizontal sliders that can be used to modify the saturation, hue and value of the image, and one for the Alpha blend opacity. The button to the right of this panel brings up a popup menu with preset options, while the set of sliders that can be found on the right hand side of the user interface can be dragged in order to modify their values. The "Create new preset" option can be used to produce a specific preset that can be found in the bottom-left corner of the control panel. Additional information on the official website The creators of Alpha Blend tell users to try out the controls first, as there are a couple of them that are quite hard to get used to at first. The plug-in can be used to significantly reduce the saturation of a photo, thus increasing the sharpness of the image. The saturation control is actually a slider, offering users three different options when the tool is in use. The Alpha Blend tool can be further edited in the color section of the "Nudge & Bump" palette. Full version can be obtained from the official site.
